Education

University of Ottawa – Bachelor of Engineering (B.Eng.), Software Engineering

Expected Graduation: May 2027

- GPA: 3.92 / 4.0 (Dean's Honour List)
- Relevant Coursework: Data Structures and Algorithms, Network Engineering, Operating Systems, Computer Architecture, Databases (SQL), Programming Paradigms, Discrete Structures, Introduction to Software Engineering, Digital Systems, Software Construction

Experience

Ciena Corporation – Software Engineer Intern

Jan 2025 – Aug 2025 — Ottawa, Ontario

- Achieved **100% functional coverage** on FEC device signals by developing **C++** and **SystemVerilog/UVM coverage models** and analyzing results using **Synopsys VCS**
- Validated ASIC chips for a **1600G optical system** by designing SystemVerilog testbenches, identifying and closing **200+ functional coverage gaps** across **2 critical subsystems**
- Designed a reusable **UVM scoreboard architecture** for SERDES, SFEC, and DFEC subsystems, eliminating **100+ hours** of redundant verification effort and improving testbench scalability
- Integrated **XPROP** with SystemVerilog bind constructs in UVM testbenches to resolve **50+ X-propagation issues**, significantly improving **simulation stability** and signal correctness
- Developed **C++ functional verification tests** for FEC decoder logic and integrated them with coverage models, increasing overall **functional coverage by 20%**
- Reduced debug time for recurring failures by **17%** by building a **Python-based automation pipeline** to track nightly regressions, analyze log histories, and surface failure patterns using shell tools and **Git**

Ford Motor Company – Software Engineer Intern

Sept 2024 – Dec 2024 — Ottawa, Ontario

- Deployed **firmware updates** to **50+ vehicle ECUs** (including TCU, SYNC infotainment modules) using **Jenkins CI/CD pipelines** and **CAN bus diagnostic tools**, validating **end-to-end integration** across **distributed vehicle systems**
- Triaged and debugged **1,000+ production defects** in **Jira** by analyzing **CAN logs**, **system traces**, and **telemetry** to isolate failures across **infotainment** and **embedded control units**
- Performed **root-cause analysis** on **20+ critical defects** by reproducing issues on **vehicle environments**, identifying faults in **ECU communication protocols**, and delivering validated fixes through **CI/CD pipelines**

Ford Motor Company – Software Engineer Intern

Jan 2024 – Apr 2024 — Ottawa, Ontario

- Reduced repeat defects by **35%** by building a **defect-tracking platform** using **React**, **Node.js**, **PostgreSQL**, enabling engineers to correlate recurring issues and improve **regression tracking**
- Reduced bug resolution time by **20%** by developing a **beta testing portal** integrating the **Jira API**, streamlining **validation workflows** and improving **regression testing efficiency**

MASV Inc. – Software Developer Intern

May 2023 – Aug 2023 — Ottawa, Ontario

- Developed a **full-stack internal admin platform** using **Vue**, **Node.js**, and **PostgreSQL** to enable customer support to instantly retrieve and manage user data, reducing **ticket resolution time by 32%** (20 min → 12 min)
- Engineered **scalable backend APIs** and optimized complex **SQL queries** to efficiently process **large file transfer datasets**, improving **system responsiveness** and support workflow efficiency
- Deployed and maintained application services using **Docker** on **AWS (EC2)**, ensuring **consistent builds** and **reliable service delivery** across development and production
- Collaborated with engineering teams to improve **CI/CD pipelines** by enforcing **automated testing** on pull requests, reducing **deployment failures by 50%** and eliminating environment-specific issues

Projects

LettuceEat – 1st Place Hackathon Winner (uOttHack 2026) | React, TypeScript, Node.js, Express, APIs

January 2026

- Developed a **full-stack web application** that enables users to browse restaurants, compare options, and coordinate group meal plans
- Implemented **restaurant discovery**, **availability matching**, and event-based planning with real-time notifications
- Integrated **YellowCake API** and **Gemini API** to aggregate restaurant data and recommend meeting times based on user availability

PlayVer – Community Sports Platform | TypeScript, Next.js, Tailwind, PostgreSQL, Vercel

Jan 2025 – Jun 2025

- Built a **full-stack sports coordination platform** enabling users to organize and join local games, currently serving **1000+ users**
- Developed scalable backend services using **Next.js** and **PostgreSQL** to manage user sessions, event creation, and real-time participation
- Deployed and hosted the application on **Vercel**, leveraging **serverless infrastructure** for reliable uptime and continuous deployment

Technical Skills

Languages: Java, Python, C++, C, JavaScript, TypeScript, Bash, Ruby, SystemVerilog (UVM)

Frameworks/Libraries: React, Next.js, Node.js, Express.js, Vue.js, Spring Boot, Django, Pytest, JUnit, NumPy, Ruby on Rails, jQuery

Cloud & Infrastructure/Developer Tools: AWS (EC2, VPC, S3, RDS, IAM, Elastic Beanstalk), Docker, Linux, QNX, Jenkins, Git, PostgreSQL, Jira, Confluence, Firebase, Supabase, Android Studio, macOS, Claude, Cursor
